Ryanair DCF: valuation model and methodology

Viktorie Kodickova | October 2026 | Valuation date 6 March 2026, share price €26.19, EUR m unless stated

Summary

Ten-year unlevered DCF of Ryanair (FY26 to FY35). Growth fades to the terminal rate, and reinvestment and the terminal value are tied to growth. The base case gives an equity value of €33,732m, or €31.62 per share, which is 20.7% above the current price. The conservative and optimistic scenarios give €24.80 and €39.23. Terminal value is 62.6% of enterprise value.

1. Method

Element	How it works	Reason	Cells
Cost of equity	Risk-free 2.86% + adjusted beta 1.0067 x ERP 6.0% = 8.90%. Adjusted beta = 1/3 x 1 + 2/3 x raw beta (1.01).	Blume adjustment, the same formula as Bloomberg Adjusted Beta.	WACC!F10, F14
WACC	94.8% equity (market cap 27,500) at 8.90% and 5.2% debt (1,500) at 3.0% after 12% tax = 8.58%.	Market-value weights.	WACC!F22
Revenue growth	FY26 at 9.09%. From FY27 growth falls by (start growth - TGR) / 9 a year, reaching 1.50% in FY35.	Growth converges to the terminal rate, so there is no jump into the terminal year.	DCF!P41:X43, D18
Reinvestment	Reinvestment rate = growth / RONIC. FY26 is 48.6% of NOPAT (RONIC 18.7%), implied by the CapEx, D&A and working capital assumptions. RONIC then fades in equal steps to WACC in FY35, reaching a 17.5% reinvestment rate. CapEx and working capital follow it.	Keeps CapEx and the working capital inflow in line with the slowing growth.	DCF!P60:X65
Free cash flow	NOPAT (EBIT margin 17.2%, tax 12%) minus net reinvestment (CapEx - D&A + change in NWC). FY26 uses D&A 8.05%, CapEx 18.28% and NWC -2.87% of sales.	FY26 levels are normalised averages of FY17 to FY19 and FY24 to FY25.	DCF rows 45 to 66
Terminal value	Terminal FCF = NOPAT FY35 x (1+g) x (1 - g/WACC). TV = terminal FCF / (WACC - g).	RONIC = WACC in the terminal year, so it continues the FY35 reinvestment rate of 17.5%.	DCF!Y54:Y66, X73
Tax, FY26 and leases	Tax rate 12%. FY26 FCF counts only the 25 days after the valuation date. Lease liabilities of 111 are deducted together with debt of 1,500.	Effective tax rate and lease liabilities from the Q3 FY26 results. Stub period matches the valuation date.	Sources & Checks B14, B24; DCF O67, S77

Base case growth path FY26 to FY35: 9.09%, 8.25%, 7.40%, 6.56%, 5.72%, 4.87%, 4.03%, 3.19%, 2.34%, 1.50%. Reinvestment rate: 48.6%, 46.9%, 45.0%, 42.8%, 40.2%, 37.2%, 33.7%, 29.4%, 24.1%, 17.5%.

2. Base case valuation

EUR m	Base case
Revenue FY35	23,305
NOPAT FY35	3,532
Unlevered FCF FY35	2,914
Terminal-year FCF	2,958
Terminal value	41,777
PV of terminal value	20,633
Sum of PV of FCF FY26 to FY35	12,310
Enterprise value	32,943
Cash	2,400
Debt and leases	1,611
Equity value	33,732
Diluted shares (m)	1,066.8
Implied price per share (EUR)	**31.62**

3. Scenarios and sensitivity

Scenario	Growth FY26 to FY35	EBIT margin	WACC / TGR	Price (EUR)
Conservative	7.0% to 1.0%	16.0%	9.2% / 1.0%	24.80
Base / Street	**9.1% to 1.5%**	**17.2%**	**8.58% / 1.5%**	**31.62**
Optimistic	11.0% to 2.0%	18.5%	8.2% / 2.0%	39.23

The sensitivity table covers WACC 7.5% to 10.0% and TGR 0.5% to 2.5%, with growth fading to the TGR of each column. The value ranges from €26.16 to €37.71 and the base cell equals the DCF price.

4. Consistency checks

- FY35 growth equals the terminal growth rate in every scenario. The reinvestment rate falls smoothly from 48.6% in FY26 to 17.5% in FY35 and stays there in the terminal year, so FCF moves from 2,914 to 2,958 with no jump.
- All cells are live formulas. The scenario table and the sensitivity table use explicit formulas on the Calc sheet, with no Excel data table. The scenario switch (DCF!D11:D14) reproduces the scenario table prices.
- The workbook recalculates with no errors in LibreOffice.
